PROFESSIONAL SUMMARY

Junior Frontend Developer specializing in React.js and Next.js, with hands-on experience building responsive, component-based web applications using JavaScript (ES6+), Tailwind CSS, and Bootstrap 5. Built and deployed 11 projects, including React applications with authentication, protected routes, REST API integration, and form validation. Studied React.js and Next.js in the Frontend Development program at Route Academy while pursuing a B.Eng. in Systems & Computer Engineering. Comfortable with Git and GitHub workflows and eager to learn backend development to grow toward a full-stack role.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, Java

Frameworks & Libraries: React.js, Next.js, React Router, Tailwind CSS, Bootstrap 5, Formik, Yup, Axios

Frontend Concepts: Component-Based Architecture, Reusable Components, React Hooks, State Management (Context API), Authentication & Protected Routes, Form Validation, REST API Integration, Responsive Web Design, Semantic HTML5, CSS Flexbox & Grid, Cross-Browser Compatibility

Tools & Platforms: Git, GitHub, GitHub Pages, Vercel, Vite, npm, VS Code, Chrome DevTools, Figma (design handoff)

CS Fundamentals: Object-Oriented Programming, Data Structures & Algorithms

PROJECTS

Social App – Social Media Web Application | Live Demo | GitHub
Technologies: *React, Vite, React Router, Tailwind CSS, Axios, Formik, Yup, Context API, REST API, Vercel*

- Built a responsive social networking app with reusable React components where users register, log in, create text and image posts, like posts, follow other users, and manage their profile, including photo upload and password change.
- Implemented authentication with protected routes and shared auth state using the Context API, persisting sessions in browser storage.
- Developed nested comments and replies with inline editing, image attachments with preview and removal, and paginated post loading with "Show More" controls.
- Integrated a REST API with Axios; added Formik and Yup form validation, toast notifications, loading indicators, and error handling; deployed on Vercel.

CineVerse – Movie Browsing App | Live Demo | GitHub
Technologies: *React 19, Vite, React Router, Tailwind CSS 4, React Toastify, Font Awesome, Vercel*

- Built a multi-page React app with Home, Movie Details, Sign Up, Login, and Not Found (404) pages, using React Router for client-side routing.
- Applied React hooks and reusable JSX components, styled the interface with Tailwind CSS, added toast notifications with React Toastify, and deployed on Vercel.

Quiz App – Interactive Trivia Game | Live Demo | GitHub
Technologies: *HTML5, CSS3, JavaScript (ES6+), Object-Oriented Programming, API Integration*

- Built a trivia game where players enter a name and choose a category (General Knowledge, Computers, Sports, History, Science, or random), a difficulty level (Easy, Medium, Hard), and the number of questions per game.
- Applied object-oriented programming and API integration in vanilla JavaScript to manage game state and quiz content, with an XP-based progression theme.

AudioGuard – React Web App (VoiceGuard AI) | Live Demo | GitHub
Technologies: *React 19, Vite, React Router, Tailwind CSS 4, Vercel*

- Developed the front end of the AudioGuard (VoiceGuard AI) project with React, Vite, React Router, and Tailwind CSS.
- Set up the project with the React Router and Tailwind CSS toolchain and deployed it on Vercel.

COSMOS – Space Dashboard | Live Demo | GitHub
Technologies: *HTML5, CSS3, JavaScript (ES6+), REST APIs (NASA APOD, SpaceDevs)*

- Built a space dashboard that integrates live data from NASA (Astronomy Picture of the Day) and SpaceDevs (upcoming launches), with date-based picture lookup, a "Load Today" action, and loading and error states with an image fallback.
- Created a solar-system explorer covering 8 planets, with a detailed orbital and physical data panel and a planet comparison table.

Portfolio – Personal Portfolio Website | Live Demo | GitHub
Technologies: *HTML5, CSS3, JavaScript*

- Built an Arabic-language portfolio website with hero, about, skills, project gallery, and contact form sections.
- Implemented a project gallery with category filter tabs and a theme customization panel that lets visitors switch the font family (Alexandria, Tajawal, Cairo) and theme color.

ContactHub – Contact Manager | Live Demo | GitHub
Technologies: *HTML5, CSS3, JavaScript (ES6+)*

- Built a contact manager for adding, editing, and organizing contacts by group (Family, Friends, Work, School, Other), with notes, profile photo, and Favorite and Emergency flags.
- Implemented client-side form validation with inline error messages for names, Egyptian phone numbers, and email addresses, plus dashboard counters and dedicated Favorites and Emergency sections.

Game Arena – Gaming Landing Page | Live Demo | GitHub
Technologies: *HTML5, CSS3, Bootstrap, Google Fonts*

- Built a responsive eSports landing page with hero, games carousel, services, team, and contact form sections, using Bootstrap's navbar, carousel, form, and button components customized with CSS into a gaming-style UI.
- Added hover effects, smooth transitions, an infinite-scroll effect, and CSS blur and overlay effects; implemented responsive breakpoints at 768px, 1024px, and 1370px.

Clarity – Digital Agency Landing Page | Live Demo | GitHub
Technologies: *HTML5, CSS3, Bootstrap 5, Font Awesome, Google Fonts*

- Built a multi-section responsive landing page for a fictional digital-solutions agency, with hero, services, tabbed technology stack, testimonials, FAQ, and consultation form sections.
- Used the Bootstrap 5 grid, a collapsible navbar with dropdown, and tab components; applied semantic HTML5 landmarks (header, nav, main, section), ARIA tab attributes, and custom gradient styling.

Mudabbir – Personal Finance Dashboard | Live Demo | GitHub
Technologies: *HTML5, CSS3, CSS Grid, Flexbox, CSS Variables, Font Awesome*

- Developed a responsive Arabic (RTL) personal finance dashboard with sidebar navigation, summary cards, a recent-transactions table, monthly bills, a budget overview with progress bars, and a weekly income-versus-expenses view.
- Built it with vanilla HTML5 and CSS3 only, using CSS Grid, Flexbox, custom properties, transitions, media queries (mobile to large screens), and 3D payment-card components with CSS transforms.

DJI Mavic 4 Pro – Product Landing Page | Live Demo | GitHub
Technologies: *HTML5, CSS3, Font Awesome, Google Fonts*

- Built a responsive product landing page with pricing and offer details, a feature-comparison table against competing products, customer ratings and reviews, a related-products section, and payment icons in the footer.
- Implemented the layout with float-and-clear techniques, media queries (767px, 1024px, 1370px), reusable card components, pseudo-elements, and hover effects with transitions.

EDUCATION

Bachelor of Engineering, Systems & Computer Engineering | Oct 2023 – Present
Al-Azhar University, Faculty of Engineering, Cairo, Egypt
Relevant coursework: Java Programming, Object-Oriented Programming, Data Structures & Algorithms, Database Systems.

CERTIFICATIONS

Frontend Development with React & Next.js | Route Academy
